

# Quick Start Guide

## Get Started in 5 Minutes

### Step 1: Open the Project

1. Make sure all 4 files are in the same folder:

- `index.html`
- `styles.css`
- `script.js`
- `README.md`

2. Double-click `index.html` to open in your browser

### Step 2: Explore

Move the sliders and watch what happens!

- Tax brackets affect when rates change
- Tax rates control how much tax people pay
- Tax credit reduces everyone's tax bill
- PRSI is a flat rate social insurance

### Step 3: Open the Code

Open all three code files in a text editor (VS Code recommended)

### Step 4: Make Your First Change

In `styles.css`, find line 74:

```
css header { padding: 1rem 0; text-align: center; /* background-color: #4C72B0; */ ← Remove the /* */ to uncomment! }
```

Save the file and refresh your browser. The header should now be blue!

## Try These Exercises Next

Easy (CSS):

1. Change the blue button color ( `#4C72B0` ) to your favorite color
2. Make the main heading bigger ( `h1` element)
3. Add rounded corners to the container (use `border-radius` )

## Medium (HTML):

1. Add a new paragraph explaining what PRSI is
2. Change the text on the reset button
3. Add a footer with your name

## Hard (JavaScript):

1. Uncomment the `calculateAverageTaxPerPerson()` function (line ~505)
2. Call it from `recalculateAll()`
3. Display the result in the summary

## Need More Help?

Read the full `README.md` for detailed explanations!

## Something Broken?

1. Press `F12` to open developer tools
2. Look at the “Console” tab for error messages
3. Check that all files are in the same folder
4. Make sure you saved your changes

## Cool Ideas to Try

- Create a dark theme
- Add more charts showing different statistics
- Calculate how much tax YOU would pay at different incomes
- Compare Ireland’s tax system to another country
- Add animations when sliders change
- Make it mobile-friendly

**Remember:** You can’t break anything permanently! If you mess up, just reload the original files and start over.

Have fun exploring!
